

Witchcraft RGB 6000 DDR5 GAMING DRAM

Product Description:

Witchcraft RGB memory modules use effectively tested original chips and have undergone rigorous screening and testing to demonstrate excellent compatibility and stability. ECC function is added to the memory particles to correct the internal components of the memory particles. Errors generated when accessing data provide a more stable and reliable environment for computers.

Each memory module has 6000 MT/s, which can greatly improve system operation efficiency. It supports Intel XMP 3.0. Beginners who are interested in overclocking can directly select the desired XMP overclocking speed setting in the BIOS to complete automatic overclocking.

The operation is convenient and the system can remain stable.

Vibrant lighting effect boosts your gaming experience, for an ultimate set up.

Witchcraft (WC) series product Information:

Memory type	DDR5
Physical dimension	U-DIMM
Capacity	32 GB (2*16GB)
Speed	XMP6000
CL value	38-38-38
Operating Voltage	1.35V
Operating temperature	0°C - 85°C
